2009 PSNH Meter Read Schedule

Reading Day or Cycle #: PSNH requires at least 20 workable days a month to read all meters in our service territory. The chart below indicates which read dates fall into each reading day cycle.

To determine when your meter will be read throughout the year: Determine what your next read date is by looking at the "next read date" in the upper-right-hand corner of your bill. Find that date on the chart below. Your meter will be read on those days listed in this row.

Exceptions: Due to power outages and/or inclement weather conditions these dates may deviate slightly.
